The long-term trends that have shaped international commerce during the post-Cold War period are changing. The engines of the era—the relatively free flow of capital across borders, the lengthy and complex global supply chains, the super-cycle of cheap credit, the stable supply of energy, and the steadily liberalizing global trade regime—have stalled or reversed course, as we enter a new period defined by very different trends, including the reappearance of high inflation and a new appreciation for credit risk.

Our downloadable report, “Legal Insights for Manufacturing,” explores how the legal and regulatory framework is evolving—and will evolve—to address the large generational shifts taking place. Broadly, these changes will potentially create risk in the following areas during 2023:

Supply chain risk and reshoring

Cybersecurity and data protection

Heightened regulatory and enforcement risk

Product safety and associated liability

Increased unionization and skilled labor scarcity
