HUSCH BLACKWELL

CLERY COMPLIANCE TOOLSET

Satisfying the Clery Act's myriad reporting requirements takes time and money that resource-stretched campus security departments often don't have. However, not achieving Clery Act compliance can result in large fines, publicity that could damage an institution's reputation, and a less secure campus environment.

The Clery Compliance Toolset (CCT), a product of HB Innovations, LLC (a wholly owned subsidiary of Husch Blackwell), addresses Clery Act compliance challenges through one easy-to-use system for developing policies and procedures, logging incidents, and generating an Annual Security Report (ASR).

A one-year subscription to the CCT costs significantly less than one Clery Act violation and can greatly reduce legal costs. The CCT will expand and support your Clery team's resources while improving access and communication in this important area of compliance.

Northwest Missouri State University has used the Clery Compliance Toolset for more than four years and it has worked great! It expedites the process and has tons of model policy language built into the system. It also allows you to build your daily crime report. Great Tool.

— Dr. Clarence Green, Chief of University Police and Vice

Customized Reporting

Use the CCT on your campus to:

DEVELOP
Clery policies and procedures

>

LOG
crime and fire incidents

>

RE
and log
from local

Why use the Clery Compliance Toolset?

Use the CCT to store and maintain policies, procedures, and incident data, allowing your campus security team to:

Save time	Provide quick, accurate access
Save money	Improve campus communications
Use resources more efficiently	Provide peace of mind

About the Clery Compliance Toolset

The CCT was created by attorneys at Husch Blackwell who, while working closely with higher education institutions, noticed a pattern of omissions and other errors in Clery Act compliance reports. Recognizing the importance of accurate reporting for campus safety purposes and the well-being of the institution, they created the toolset, now in its third version.
